Overview

UC—Berkeley offers students around 350 degree programs. Some of the most popular majors for Berkeley undergraduates have included electrical engineering and computer science; economics; political science; business administration; and psychology. Around a quarter of undergraduate students live on campus, including some 95 percent of freshmen. Many graduate students live off campus, but they have the option to live in university-owned accommodations. Roughly 15 percent of the student body is international, and tuition and fees are higher for out-of-state students. Around 3,000 international scholars come to Berkeley each year in temporary teaching or research positions. Berkeley research is conducted not just within academic department labs and research centers but also in some of the school's museums and university-managed biological field stations. Research in botany, zoology, ecosystems and forestry is undertaken at the remote field station sites. Berkeley researchers discovered several of the elements on the periodic table, including californium and berkelium.

Overview

"Mind and Hand" is the thought-provoking motto of the Massachusetts Institute of Technology, known also as MIT. This motto enigmatically encapsulates this famous institution's mission to advance knowledge in science, technology and areas of scholarship that can help to make the world a better place.

At its founding in 1861, MIT was initially a small community of problem-solvers and science lovers eager to bring their knowledge to bear on the world. Today, MIT has evolved into an educational behemoth, with some 1,000 faculty members and more than 11,000 undergraduate and graduate students.

MIT is now an independent, non-profit university organized into five schools (architecture and planning, engineering, humanities, arts, and social sciences, management, science). Yet the principle of educational innovation remains at the core of MIT's educational philosophy.

MIT researchers are at the forefront of developments in artificial intelligence, climate adaptation, HIV, cancer, and poverty alleviation, while in the past MIT research has fuelled scientific breakthroughs such as the development of radar, the invention of magnetic core memory and the concept of the expanding universe.

Science and technology are not the only strings to MIT's bow. However, approximately 20 percent of MIT undergraduates join a sports team, and with 33 varsity sports MIT boasts one of the broadest intercollegiate athletic programs in the world.

A vibrant arts culture also permeates college life. There are 12 museums and galleries on campus, with the MIT Museum drawing nearly 125,000 visitors each year. Students participate in more than 60 music, theatre, writing and dance groups, and faculty members of MIT even include Pulitzer Prize winners and Guggenheim fellows.

MIT is set in 168 acres of grounds that extend for more than a mile along the Cambridge side of the Charles River basin. The campus features stunning landmarks designed by the likes of architects Alvaro Siza, Frank Gehry, and Steven Hollin, as well as buildings in a range of architectural styles, from neoclassical to modernist and brutalist.

At its edges, the campus merges with various Cambridge neighborhoods, including Kendall Square which is one of the most innovative square miles on the planet. The close association of industry and research has helped MIT alumni go on to launch more than 30,000 active companies, creating 4.6 million jobs and generating roughly \$1.9 trillion in annual revenue. No wonder then that a nation of MIT graduates would be equivalent to the 10th-largest economy in the world.

# Stanford University

Overview

Overview

Located 35 miles south of San Francisco and 20 miles north of San Jose, Stanford University is in the heart of Northern California's dynamic Silicon Valley, home to Yahoo, Google, Hewlett-Packard, and many other cutting-edge tech companies that were founded by and continue to be led by Stanford alumni and faculty. Nicknamed the "billionaire factory," it is said that if Stanford graduates formed their own country it would boast one of the world's largest ten economies.

Covering 8,100 acres, Stanford has one of the largest university campuses in the US, with 10 interdisciplinary research institutes and seven schools: the Graduate School of Business; School of Earth, Energy & Environmental Sciences; Graduate School of Education; School of Engineering; School of Humanities and Sciences; Law School; and School of Medicine.

Stanford University was founded in 1885 by California senator Leland Stanford and his wife, Jane, to "promote the public welfare by exercising an influence in behalf of humanity and civilization". The couple's only child had died of typhoid, and their decision to build a university on their farm was intended as a memorial. From the start the university was non-sectarian, co-educational and affordable, teaching both the traditional liberal arts and the technology and engineering that was shaping the new America at the time.

Fast forward more than a century, and Stanford counts 10 Nobel laureates within its community and is regularly ranked among the top three universities in the world. Nicknamed "The Farm" from the days when horses roamed there, Stanford's campus is now a thriving community of more than 11,000 creative and accomplished people from around the world. Nearly all undergraduate and 80 per cent of graduate students live on campus, so it is hardly surprising that student life is rich and diverse, with over 825 organized student groups.

Sport is popular, with students, faculty and staff enjoying state-of-the-art recreational facilities and wellness programs. Stanford students compete in 38 varsity and 32 club sports, including baseball, football, basketball, and squash. Sports teams are referred to as the "Stanford Cardinal".

Stanford also has a rich tradition of fostering creativity and the arts: there is a vibrant campus arts district and two world-class museums which host regular exhibitions. Eight dining halls, a teaching kitchen and organic gardens provide the campus community with healthy, sustainable meals. The close-knit communal nature of life on campus has even given rise to "Stanford speak", a special language only spoken on campus.
